

AN INVESTOR PROFILE

Transforming Waste *into Sustainable Value*

A bio-technology venture turning organic waste into high-value protein, oil, and fertilizer — powered by Black Soldier Fly larvae within a scalable circular-economy model.

FEATURE · THE CIRCULAR ECONOMY

Founded by Ammar Al-Rafou · Jordan

The Project

at a glance

A Jordan-based bio-technology venture transforming organic waste into high-value outputs — insect protein feed, natural oils, and organic fertilizer — using Black Soldier Fly (BSF) larvae within a scalable circular-economy model with regional expansion potential.

CHAPTER ONE

About the Project

& the investment thesis

Ecovera is a bio-tech venture that converts organic waste into high-value products using Black Soldier Fly larvae — a circular-economy model linking waste management, food security, and environmental sustainability.

The Project

an integrated system

Ecovera was founded to address a dual challenge facing the Arab region: growing volumes of unused organic waste on one hand, and heavy dependence on imported protein feed on the other. The project offers an integrated technological solution that turns waste into high-value resources instead of letting it accumulate in landfills.

The system relies on the lifecycle of Black Soldier Fly larvae, an insect known for its ability to consume large volumes of organic material in a short time and convert it into a biomass rich in protein

and fats, alongside a natural organic fertilizer (frass) as a by-product.

The project produces four primary outputs: insect protein for animal feed, multi-purpose insect oils, high-quality organic fertilizer, and waste-processing services for institutional partners seeking sustainable disposal pathways.

Ecoveera targets fast-growing sectors across Jordan and the wider region — poultry, aquaculture, organic farming, and waste management — positioning itself as a leading model in regional bio-technology and the circular economy, with clear expansion potential into Egypt and the Gulf.

VISION

*To become a leading model for the
circular economy and bio-
technology in Jordan and the region
— transforming an environmental
problem into a sustainable economic
value chain.*

PROJECT VISION

Ecovera · 2026

CHAPTER TWO

Process

& operational technology

An integrated Black Soldier Fly production cycle that converts organic waste into high-value products in 10–14 days, across four engineered operational stages.

From Egg

to finished product

Four sequential operational stages, each engineered to maximise conversion efficiency from organic inputs into market-ready, high-value outputs.

01

Nursery

Egg collection & hatching

Eggs are gathered and placed in a controlled-temperature, humidity-managed environment until they hatch into small larvae ready for the primary feeding stage.

02

Rearing

10–14 day feeding cycle

Larvae are transferred to rearing bins where they feed on organic waste for 10–14 days, transforming it into a biomass rich in protein and fats.

03

Pupation

Breeding & egg cycle

A portion of the larvae is retained to complete the lifecycle and produce the eggs needed for continuous in-house operation without external inputs.

04

Harvest

Drying & extraction

Larvae are separated from the organic fertilizer, then dried and processed to extract protein and insect oils alongside market-ready compost.

Why BSF?

A technology that combines rapid conversion, low resource consumption, and high flexibility in input variety — making it uniquely suited to the circular-economy model.

OPERATIONAL ADVANTAGES

The Edge

- Rapid organic-waste conversion
- Low water and energy use
- Short cycle — just 10 to 14 days
- Multi-source production
- Low environmental footprint
- High scalability potential

ACCEPTED INPUTS

The Feedstock

- Central market organic waste
- Restaurant & hotel residuals
- Food-processing waste
- Agricultural residues
- Select animal by-products

INSIDE THE FACILITY

Inside the Plant

An operational facility running today — 320 rearing bins across 10 climate-controlled rooms, with capacity to process up to 25 tonnes of organic waste daily.

Scenes from the Floor

Real lens captures from the current production infrastructure — treated in editorial duotone.

CHAPTER THREE

The Market *& the opportunity*

Alternative protein and organic-waste management are among the fastest-growing global sectors today — driven by intertwined economic, environmental, and regulatory forces.

Five Drivers

behind the opportunity

The sector is experiencing accelerated global growth, propelled by a convergence of economic, environmental, and regulatory forces — all of which align with the Ecovera model.

01

Rising costs of conventional feed

02

Growing global demand for protein

03

Worldwide shift toward green economy

04

Demand for low-emission solutions

05

Poultry & aquaculture expansion

REGIONAL SPOTLIGHT · EGYPT

The Egyptian Market — a regional expansion play

Large organic-waste volumes, rapid growth in poultry and aquaculture sectors, heavy dependence on imported feed, and a governmental push toward green-economy investment — all of which make Egypt the natural next expansion target for the Ecovera model.

Three sectors. Multiple revenue streams.

Ecovera does not rely on a single income source. The model is built on an integrated system linking three naturally complementary sectors, de-risking revenue and increasing resilience.

FEED SECTOR

Feed

- Poultry farms
- Aquaculture operators
- Feed manufacturers
- Pet-food brands

AGRICULTURE

Agriculture

- Organic farms
- Greenhouse operators
- Fertilizer companies

WASTE MANAGEMENT

Waste

- Municipalities
- Central markets
- Food companies
- Industrial kitchens

CHAPTER FOUR

The Production Line

& product portfolio

Four flagship products under the Ecovera label — all derived from one integrated production cycle, packaged and branded for the local and regional markets.

Four Products

under the Ecovera label

Packaged, branded, and ready for distribution across local and regional markets.

PROTEIN FEED • 25 KG

Protein Feed

High-protein feed derived from BSF larvae for poultry and aquaculture — a sustainable alternative to fishmeal and soybean meal.

BIO FERTILIZER • 50 KG

Bio Fertilizer

High-quality organic fertilizer that improves soil fertility and water retention — certified and export-ready.

INSECT OIL • 50 KG

Insect Oil

Black Soldier Fly oil — a natural, anti-bacterial, multi-purpose oil used across feed and industrial applications.

PREMIUM COMPOST • 50 KG

BSF Compost

Premium organic compost rich in natural micronutrients and beneficial soil microbes for high-yield agriculture.

CHAPTER FIVE

Infrastructure

& the investor opportunity

The numbers, the measurable impact, and the five pillars that make Ecovera a distinctive investment opportunity in alternative protein and circular bio-economy.

Built to scale

& expand

TRIPLE IMPACT

Environmental

- Reduces organic waste volumes
- Lowers landfill emissions
- Supports recycling streams
- Reduces conventional protein reliance

Economic

- Cuts local feed costs
- Creates sustainable protein alternatives
- Adds value to organic waste
- Multiple revenue streams

Social

- Creates green jobs
- Supports entrepreneurship
- Develops local agriculture
- Empowers youth employment

Five Reasons

to invest in Ecovera

01 **A high-growth sector**

Alternative protein and the circular bio-economy are among the fastest-growing global sectors, propelled by accelerating demand for sustainable solutions.

02 **A diversified revenue model**

Multiple complementary products and services reduce operational risk and reinforce financial resilience against market volatility.

03 **Measurable, direct impact**

Beyond financial returns, Ecovera delivers documented environmental and social impact — opening doors to sustainable financing channels.

04 **High scalability potential**

The operational model can scale through capacity expansion at existing sites or geographic expansion into Egypt and the Gulf.

05 **ESG-aligned by design**

The model meets sustainability, green-economy, and ESG criteria — widening eligibility for international financing and partnerships.

GET IN TOUCH

Let's build

the next model for the circular economy

Ecovera is seeking strategic partners and investors to accelerate growth and build an advanced production facility capable of meeting the rising regional demand for sustainable protein and organic-waste solutions.
